

On Thursday, July 16, The Rockefeller Foundation is releasing an update to its Covid-19 testing and tracing action plan.

Background

As more cities and states begin to loosen restrictions and reopen businesses and other institutions, Covid-19 cases continue to accelerate in more than half of the U.S. Without a strategy that involves rapidly scaling up fast, inexpensive screening tests that can be used by schools, nursing homes and places of work, America faces an impending disaster.

The Rockefeller Foundation has developed a new testing strategy to not only safely reopen our communities and workplaces, but to keep them open this fall. This requires smarter testing, improved contact tracing, and increased investment from partners. The plan outlines four recommendations:

1. Resolve diagnostic testing shortages and implement widespread screening testing
2. Increase the use, speed, public trust, and support services for contact tracing
3. Strengthen the data infrastructure and use data to drive testing and tracing
4. Focus public communications on the value of personal safety measures, testing, and tracing

Our Ask

We hope you will join us in sharing messages from the plan to make the case that the U.S. needs smarter testing, improved contact tracing, stronger data infrastructure, and more effective public health communication in order to keep the country open.
